Education

2015-2019

University Of Petroleum and Energy Studies (UPES)

- B.Tech. Computer Science & Engineering Specialization in Open Source & Open Standards

Honors & Awards

- “Above & Beyond” — Site Engineering India Award, for building gRPCurli
- VP **Limelight** — “Shutdown Stability Champion”
- Multiple **Bravo** awards for gRPC GA & cross-team impact

Talks

Open Source Summit North America 2022 Austin, Texas

Intellectual Cognitive Development in Artificial Intelligence

Contributor at [SchoolOfSRE](#)

aimacode

Code contributor for *Artificial Intelligence: A Modern Approach*

Skills

Languages: Go, Python, Java, C++

Backend: gRPC, rest.li, microservices, Service Discovery, REST APIs, System Design, Kafka, Redis, MySQL

AI/ML: GenAI and LLM integration, TensorFlow, prompt engineering

Platform: Kubernetes, Observability, Linux, Git

Summary

Software engineer with ~8 years at LinkedIn building and owning large-scale distributed systems and backend platforms end-to-end. Created **gRPCurli** — LinkedIn’s gRPC developer tooling, adopted across **500k+ hosts** and integral to the company-wide migration from rest.li to **gRPC** — now used daily across backend, AI/ML-serving, and data teams. Has owned shared platform libraries, service-discovery systems (**Sceptre**, **Traffic Insights**), and cross-org migrations, and shipped **GenAI-powered** features on top — pairing deep distributed-systems and API-design expertise with design ownership and technical leadership.

Experience

Mar 19 – Present **LinkedIn**

Bangalore

Senior Software Engineer

gRPC Tooling & Service Discovery

- Created and led **gRPCurli** — LinkedIn’s CLI for invoking and exploring gRPC services (“curl for gRPC”); delivered all P0/P1 feature parity required for company-wide **gRPC GA** (the initiative replacing rest.li).
- Engineered server streaming, distributed tracing, Datavault auth, and D2-proxy routing; distributed fleet-wide to **500k+ Prod/Corp/Dev** hosts.
- Led the design for gRPC service discovery & exploration in **Sceptre** (LinkedIn’s service-exploration portal, **4,000+ monthly users**), now surfacing **680+ gRPC services** and their RPCs org-wide.
- Sole maintainer of LinkedIn’s gRPC developer tooling — supported and unblocked teams across the org and contributed upstream fixes to the open-source [grpcurl](#).

Platform Libraries & Migrations

- Authored a vendor-neutral **incident-data abstraction** adopted across all **6 services owned by the team** (typed Incident-Provider + dual-read cutover), reducing future incident-tool migrations to a one-line config change.
- Built **Traffic Insights**, a reusable gRPC library exposing real-time traffic metrics (traffic %, online bucket count, shift reasons) across internal services; migrated all **10 legacy Traffic-Shift REST APIs to gRPC** across 4 consumers.

Ravens — incident-notification platform (tech lead): owned the weekly sync, reviewed every PR and owned on-call; enhanced rate limiting; built **GenAI-powered incident summaries**.

Reliability & Leadership: Incident Lead on Sev0/Sev1 events, with executive updates to top engineering leadership (CTO/SVP/President); mentored 5+ engineers and hired 5 FTEs.

Software Engineer

SenSus: deep-learning sentiment model (CNN + Word2Vec, TensorFlow) at **85% accuracy**.

Omnibot: Slack bot on Slack’s Real-Time Messaging API.

May – Aug, 18

Red Hat, R&D

Bangalore

Software Engineering Intern

Built a **Satellite log-analysis tool** on the ELK stack and authored **Red Hat Insights** detection rules.
